DETAILED ACTION

1. This office action is in response to communication filed on 8/7/06. Claims 1 – 16, and 19 – 23 are pending on this application. Claims 5 – 16 and 19 – 23 have been canceled. Claim 1 has been amended. Claims 1 – 4 are remaining on this application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 – 4, rejected under 35 U.S.C. 102(b) as being anticipated by Yukawa U.S. patent No. 5,010,347.

Regarding to claim 1, Fig. 1 of Yukawa disclose a digital amplify system including a noise shaper (10) and a dither generator (32) arranged to introduce noise to the shaper (10), said generator (32) using a seed value (output signal of 20 feed into 32) derived from a state variable (variable output of 20) of said shaper (10).

Regarding claim 2, Fig. 1 further discloses wherein the number of bits generated noise (20) exceeds (bit input of 32 is a portion of the bits output from 20; thereby the bits output of noise shaper is always exceeds the bit input of 32) that of the seed value (bit input of 32).

Regarding claim 3, wherein the dither generator (32) includes shift registers (fig. 2[40]) of predetermined bit lengths to receive said seed values (22), and provides a noise output (33).

Regarding claim 4, Fig. 1 further discloses means (34, 36, 38) for scaling said noise.

Response to Arguments

4. Applicant's arguments with respect to claim 1 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Yukawa. Fig. 1 of Yukawa discloses a noise shaper (10) having a variable output (output of 22), and a dither generator (32) introduce noise to the shaper (10) according to the output of the shaper.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2819

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
